

Additional data file 2. Correlation of Nucleotide contents against A, T or C in eukaryotes, chloroplasts and plant mitochondria. Red, green and purple represent 18 eukaryotes, 97 chloroplasts and 49 mitochondria, respectively. Colored regression lines were computationally drawn. On the figure, a and b represent the slope and intercept, respectively, in $y = ax + b$, and w represents both factors. ** $p < 0.01$, * $0.05 > p > 0.01$
