

SUPPLEMENTARY MATERIAL 1

Zinc Lozenges May Shorten the Duration of Colds: A Systematic Review

Harri Hemilä

Department of Public Health, University of Helsinki, Helsinki, Finland

Notes:

- ¹⁾The Eby & Halcomb (2006) [28] trial is excluded because the lozenge was used with a nasal spray and thus the comparison was not specific to the lozenge.
²⁾Al-Nakib *et al.* (1987) [37] Farr *et al.* (1987) [39] studied experimentally induced rhinovirus infection.
³⁾The Godfrey *et al.* (1992) [19] trial is listed in MEDLINE, but the abstract does not contain the term “lozenge” and therefore the MEDLINE search does not identify it.
