Aims & Scope:
Precision cancer medicine is dependent on the discovery and utilization of cancer biomarkers. The discovery of cancer biomarkers is the basis for early detection, diagnostic, and therapeutic strategies that are underpinned by rigorous science. In the last two decades, the number of novel biomarkers discovered has grown exponentially. Researchers and clinicians with interest in cancer biomarker discovery and applications will benefit from a special issue focused on articles describing the discovery and applications of new cancer biomarkers. The aim of this special issue is to shine a spotlight on novel cancer biomarkers and their potential clinical applications. This special issue will accept all articles that are relevant to any aspect of cancer biomarker discovery, validation, and application. All article types, including original articles (of all lengths) and reviews, are welcome.

Keywords:
Cancer; Biomarker; Diagnostic; Prognostic; Therapeutic target; Discovery; Non-invasive

Subtopics:
The subtopics to be covered within this issue are listed below:
- Diagnostic biomarkers
- Prognostic biomarkers
- Therapeutic targets

Schedule:
- Manuscript submission deadline: September 1, 2019
- Peer Review Due: October 1, 2019
- Revision Due: December 1, 2019
- Notification of acceptance by the Guest Editor: December 15, 2019
- Final manuscripts due: January 1, 2020

Contacts:
Guest Editor: Olorunseun O. Ogunwobi
Affiliation: City University of New York – Hunter College
Email: Ogunwobi@genectr.hunter.cuny.edu
