

Tentative Outline

Special Thematic Issue for The Open Nursing Journal

“Alignment of Primary Health Care with the Sustainable Development Agenda”

Guest Editor: Dr. Alvaro Lopes-Sousa

Aims and Scope

The Sustainable Development Goals are a universal call to action to end poverty, protect the planet and improve everyone's lives and perspectives, anywhere, in a vision that unites principles such as global health, planetary health and one health. The listed objectives, which are 17, were adopted by all UN Member States in 2015, and are part of the 2030 Agenda for Sustainable Development. With 10 years to the end of this agenda, reflecting on the progress that has been made in many places around the world can provide a useful overview, as well as pointing out important gaps.

Primary care is the path to universal health. The importance of ensuring attention at the first contact is highlighted, which is one of the essential attributes of Primary Health Care (PHC), as it corresponds to the accessibility and use of the service by the user for each new problem or new episode of a health problem improving Universal Health Coverage indicators.

Keywords

Global Health, Primary Health Care, Universal health Coverage, Sustainable Development Goals, Planetary health, One health, Health, Development Countries.
